Stock Market Analysis

Overview:

In this digital age, cloud computing has revolutionized the way businesses and individuals store, access, and manage data, so our market segment will be based on online cloud service providers and to represent this market segment we chose Microsoft (MSFT), Oracle (ORCL), and Amazon (AMZN). These online service providers offer a numerous of cloud computing resources such as Infrastructure as a service (IaaS), Platform as a service (PaaS), and Software as a service (SaaS) where companies like Amazon Web Services (AWS), Microsoft Azure, and Oracle cloud provide on-demand access to computing power, storage, networking, and applications. These services not only provide computing resources but also flexibility, accessibility, and innovation. Many organizations have turned to online cloud services making it extremely popular over the last few years. As more businesses have shifted their data to these online cloud service providers, its encouraged people to show interest and invest in these stocks because of the cost effectiveness, accessibility, and flexibility allowing them to access data from anywhere.

Each member of our team has chosen one of these three stocks where we all worked to write a code that produced a series of charts and graphs that will allow Big Deal Corporation to better determine the future investments and acquisition strategy of the enterprise. In this report, we've provided a brief overview of these companies as well as charts and graphs that will help sum up the performance of three companies over the last 5 years. Based on this data we will also give a recommendation of the company that would be the best investment option to make.

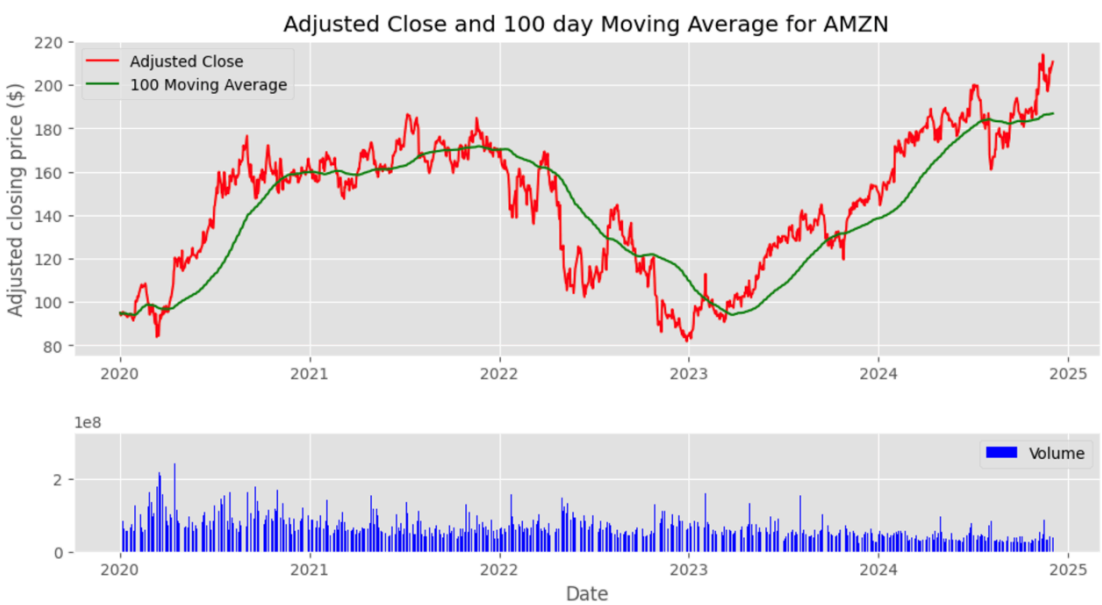
Adjusted Price with 100-Day Moving Average Graph for Amazon (AMZN)



Conclusion:

The data that's displayed in the charts and graphs shows that over the course of 5 years, while there have been times where there were drops, most of the time there would be a steady increase in the adjusting closing price and 100 day moving average for all three companies. So, because there has been a steady increase within each company, as a team, and after doing a bit more research, we discussed what other factors that we need to consider because each company has unique strengths and risks. Microsoft is a balanced investment option offering growth, stability and dividends; its immense strength in cloud computing (Azure) will ensure long term growth potential. Oracle is a stable, income-oriented investment offering moderate growth due to its expanding cloud infrastructure, but it lacks the high growth potential that Microsoft and Amazon have. Amazon on the other hand is a high growth, high risk investment. It's known for investing in new technologies which could lead to capital gains, but the caveat is that there's higher unpredictability. After weighing the strengths and weaknesses of each company we've come to the conclusion that Microsoft would be the best online cloud computing service company to invest in. It balances risk and reward better than most competitors and its combination of stability, innovation, and strong financial performance makes it an ideal choice for a corporation seeking long term growth and reliable investment returns.
